Team work for streaming: gaming headphones TYGR 300 R and USB microphone FOX form TEAM TYGR, the perfect bundle for Twitch, YouTube and more

beyerdynamic TEAM TYGR combines headphones and microphone for gaming

December 2018 – In nature, fox and tiger are rarely seen together; in gaming, they are now a team: beyerdynamic presents TEAM TYGR, the perfect bundle for gaming and streaming. The combination of USB microphone FOX and the all-new gaming headphones TYGR 300 R allows for outstanding sound while being irresistibly easy to use – set up, plug in, play. Streamers can focus entirely on their channel's contents and enjoy the headphones' excellent sound while their viewers will be pleased with the professional studio quality of FOX.

Kickstarting the live stream

Getting TEAM TYGR ready could not be easier: set up microphone FOX, connect it via USB and plug TYGR 300 R into the headphone jack. Done! No driver installation required, FOX is immediately recognised as an audio device and can be used right away. Reducing the controls to the essentials improves workflow and ease of use even more: two gain settings adjust the microphone level to allow optimisation for different distances to the microphone. One knob sets the headphone level, a second one mixes the game sound with the direct microphone sound for latency-free monitoring through the headphones. A mute button cuts the microphone when required. With little to no effort, the setup is ready to broadcast straight to the web.

Your stream, your team: the compact streaming setup

The effortless setup and ease of use of TEAM TYGR are the result of condensing all necessary components in the compact housing of beyerdynamic FOX. The microphone includes a high-quality capsule, the microphone preamplifier, analogue-to-digital and digital-to-analogue converters and a headphone amplifier. Instead of having to set up and wire all individual components, TEAM TYGR aggregates the whole audio part of the streaming environment into lightweight, compact and sturdy pieces: headphone TYGR 300 R and microphone FOX.

Platform-independent top performance

TEAM TYGR has another advantage compared to complex professional solutions – it can easily be hooked up to the gaming console. As a result, streaming games is not limited to PCs, but can be done from PlayStation®4 or Xbox One as well. No matter if a computer or a console is used for streaming, with reliable, high-quality gear games are so much more fun and gamers can perform perfectly. Better speech quality, better sound – better performance!

Hardware upgrade to legendary

beyerdynamic is known to hold its products to the highest quality standards. True to this philosophy, TEAM TYGR picks up voices with exceptional clarity through USB microphone FOX, and plays back sound vividly and transparently through open-back headphones TYGR 300 R. In the tradition of gaming legend MMX 300, the TYGR 300 R is manufactured in Germany, presenting the extraordinary build quality beyerdynamic headphones are famous for.
